

Nozzle technology

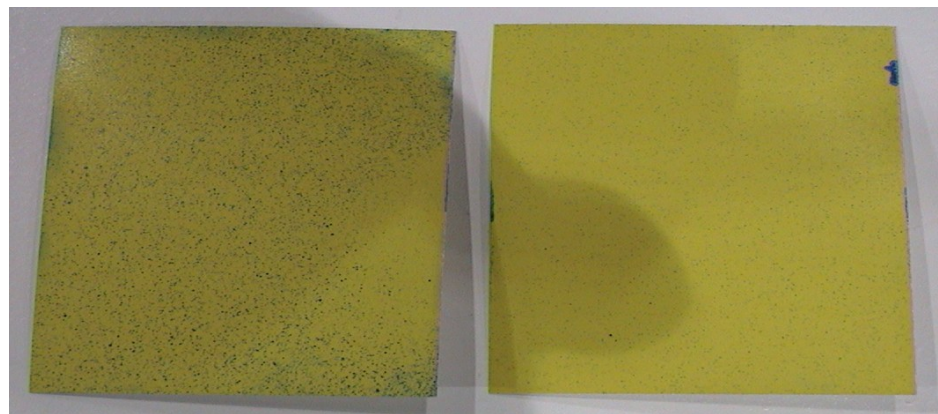

The premium Reldair nozzle, which is used in both the Pro-line and Horti-line system is produced under own supervision to ensure its high valued characteristics.

Produced from high strength stainless steel with integrated polyethylene filter this nozzle is almost insensitive to fouling and wear. Reldair is the only fog system supplier who guarantees it's nozzles on 5 years of troublefree use.

Nozzle	Capacity*	Droplet size
FP-150X	4,0 l/h	3 micron
FP-200D	6,5 l/h	5 micron
FP-250X	8,0 l/h	7 micron
Fanfog	8,0 l/h	8 micron

*Other capacities on request available

Competitive nozzle system

Reldair FP nozzle system

Unique characteristics

By the combination of premium components and over 30 years of experience in designing fog systems each Reldair system with FP-nozzles delivers a premium droplet. This precision droplet has a micron size with a very small droplet distribution. This ensures no large droplets by clumping which might cause damage to your flowers, crops or animals or might create wet spots on the floor. The Reldair FP-nozzle based fog system has a proven record of hundreds of installations all over the world. For your application we can provide you references on request.
